(a) General imports or total imports.

(b) General exports or total exports.

(c) Includes coin and bullion.

(d) Trade with British Possessions in America.

COINAGE WEIGHTS AND MEASURES.

To assist in arriving at a comprehensive understanding of the value of foreign currencies, weights and measures (as expressed in foreign trade returns, tariffs, &c.,) as compared with those of Canada, tables have been prepared as follows:—

As regards those of Canada, the law provides that the denominations of money in the currency of Canada shall be dollars, cents and mills, the cent being the one hundredth part of a dollar, and the mill one tenth part of a cent.

That.—The currency of Canada shall be such that the British sovereign (the pound sterling) of legal weight and fineness, shall be equal to four dollars eighty-six cents and two-thirds of a cent.

In like manner the law provides as respects weights, that the unit shall be the standard pound (avoirdupois) of 7,000 grains, one-sixteenth part of the standard pound shall be an ounce ($437\frac{1}{2}$ grains) one hundred pounds a cental, and two thousand pounds a ton, and that four hundred and eighty grains shall be an ounce troy, or 5,760 grains a pound troy.

As regards measures—that the unit or standard measure of capacity, as well for liquids as for dry measures, shall be the gallon containing ten standard pounds weight of distilled water weighed with the water and air at a temperature of sixty-two degrees Fahrenheit, with the barometer at thirty inches, that the quart shall be one-fourth part of the gallon, and the pint one-eighth part of the gallon, and that eight gallons shall be a bushel.

This gallon commonly known as the 'Imperial Gallon,' contains 277.274 cubic inches, or 353.036 cylindrical inches.

The standard measure of length is the yard, one-third part of which it is provided shall be a foot, and the twelfth part of such foot shall be an inch.

In many countries the Metric system of weights and measures has been adopted. A separate table of Canadian equivalents of these is given in order to avoid repetition, the word 'Metric' being used in the general table in each case where the system is in vogue, as indicating a reference to that table.

The equivalent value of the monetary unit can only be given as respects those countries having a gold standard. Where silver is the standard, the value of the currency necessarily fluctuates correspondingly to the market value of silver bullion, and were any attempt made to quote the value of such currency it would, under present circumstances, be misleading, therefore, the weight in decimal parts of an ounce with the fineness of the coin is given instead, which will enable any one to approximate the value of the currency according to the current value of fine bar silver. As an example, say fine bar silver at 75 cents an ounce, the Bolivian dollar weighs .801 of an ounce, its fineness is .900, therefore $75 \times .801 = 60.075$ which $\times .900 = 54.0675$, or a small fraction over 54 cents, and the actual intrinsic value of the pure silver contained in the coin, to which should be added a reasonable allowance to cover the value of the alloy, the cost of the coinage, and in some instances exchange, the aggregate of which would be approximately the current value in Canadian currency of the dollar in question.

Unless carefully noted, the quotations as usually given of the current value per ounce of silver may be misconstrued and lead to misapprehensions, as it is sometimes quoted per ounce *fine*, and sometimes per ounce *standard*; thus for instance on a certain day the London quotation reads 'fine silver per ounce standard 32d.,' while on the same day it is quoted in New York '69½ cents per ounce fine;' as 32d. is equal to a fraction over $64\frac{7}{8}$ cents, there would appear a difference of about $4\frac{5}{8}$ cents per ounce between the two prices, the New York price appearing that much in excess of the other, were it not noticed that one is based upon *standard* fineness and the other upon absolute fineness, but by reducing the New York "fine" to London "standard" (of .925 fine, or 444 grains fine to the ounce) the actual difference between the two quotations is found to be only about $\frac{5}{8}$ of one cent per ounce, the London price being that much in excess of the New York.

SESSIONAL PAPER No. 10f

To reduce the value of *standard* or sterling silver when expressed in pence to *fine* expressed in cents, multiply the pence and decimal parts thereof by 2·192.

To find the *standard* or sterling value expressed in pence and decimal parts thereof when *fine* is expressed in cents multiply the cents by 0·4562.

*Old weights and measures sometimes used. †The values in Chinese Imperial Customs Returns are always given in Haikwan taels, which are relatively in value equal to about 1.113 Shanghai taels. The tael is in reality not a standard of value (there is no such coin), but of weight, and when used in the sense of a value it only represents its weight in gold or silver, as the case may be, the real difficulty is to establish its exact equivalent in grains. Authorities differ greatly, as also does the practice in different sections of China. The Chinese are far from being inexact, and the probability is that there exists a standard, and a further probability that it is equal to 10 Japanese monmes, or 579.72 grains, which figures have been used in computing the value as above. It will be observed, however, that these figures fall short about 3.61 grains from the weight usual (say 1 $\frac{1}{4}$ oz. per tael) in dealing with the weights other than those of gold and silver. §Usually reckoned same as Chinese Picul of 133 $\frac{1}{2}$ lbs. ¶This is long measure. Cloth measure is 25% greater in length than long measure. Therefore by cloth measure 1 sun = 1.4916 in. 1 shaku = 14.916 in. and 1 jo = 149.16 in.

TABLE of Constant Factors, which multiplied by the current value per ounce of silver either pure or standard as the case may be, will give the value of the silver contained in the coin referred to, to which if there be added a small percentage to cover the value of the alloy and the cost of coinage, the aggregate will equal the intrinsic value in Canadian currency of the coin in question.

SESSIONAL PAPER No. 10f

TABLE of Sterling Pence (20 to $37\frac{1}{8}$) and fractions thereof, with statutory equivalents in Canadian cents and decimal parts thereof, for use in connection with the foregoing table of Constant Factors.

EXAMPLE—Silver at $27\frac{5}{8}$ pence per oz. standard, what is the value of the silver in the Bolivian dollar?
ANSWER— $\cdot 77935 \times 56\cdot 016 = 43\cdot 656$, or nearly $43\frac{3}{5}$ cents.

Pence.	Cents.	Pence.	Cents.	Pence.	Cents.

The imports from Hong Kong come originally from, and the exports to that colony are further carried on to the United Kingdom, America, Australia, India, &c., and coast ports of China. In addition to the imports, to which the values given in the above table are confined, the South of China is supplied with opium and other articles imported from Singapore, Siam and other foreign places in native vessels.

CHINA.

Total Quantities and Values of the Principal Articles Imported for Consumption (Merchandise only) during the Years ended December 31, 1905 to 1909, inclusive.

NOTE:—The average value of the Haikwan Tael for 1905 was 73 cents, 1906, 80 cents, 1907, 79 cents, 1908, 65 cents, and for 1909, 63 cents. Picul=133·3 lbs. Gallon and ton, same as Canadian.

NOTE:—The statistics which prior to the March 1, 1906, related to the “Zollgebiet” or Customs Union, now cover the trade of an enlarged area known as the “Wirtschaftsgebiet” or Economic Union, in which the Free Ports of Hamburg, Cuxhaven, Bremerhaven and Geestemünde are included. The trade with these ports accordingly disappears from the statistics from that date.

SESSIONAL PAPER No. 10f

GERMANY (Wirtschaftsgebiet. See Foot Note.)

Total Quantities and Values of the Principal Articles of Domestic Produce Exported (Merchandise only) during the Years ended December 31, 1905 to 1909, inclusive.

NOTE :—Mark=23·8 cents. Kilog=2·204 lbs.

NOTE:—The statistics which prior to March 1, 1906, related to the “Zollgebiet” or Customs Union now cover the trade of an enlarged area, known as the “Wirtschaftsgebiet” or Economic Union, in which the Free Ports of Hamburg, Cuxhaven, Bremerhaven and Geestemünde are included. The trade with these ports accordingly disappears from the statistics from that date.
